

This integration requires the following information provided to Dstny

- **key:** (the CRM script authentication key)
- **Token:** (username:password encoded in Base64)
- **custid:** (customer ID, you can find it in URL. <https://online.superoffice.com/Cust42947/default.aspx>)
- **header:** (custom header, default value is "X-CRMScript-Auth")

In order to enable the integration, you need to have a CRMScript script named "searchContact" available in Admin client > CRMScript tab. The script is handled by Superoffice vendor (iCentrum)

Following these steps to create CRM script and get the "key":

1. To create CRM script, Development Tools (previously Expander Services) license is required.
2. Log in SuperOffice [website](https://id.superoffice.com/)¹, Open the Admin client by selecting **Settings and maintenance** from the hamburger menu. Select **CRMScript** from the left menu. Refer to this [link](https://docs.superoffice.com/en/automation/crmscript/overview/envir-and-tools.html)² for more detail.
3. Create a script and add the code.
4. The key value is displayed on the top of script detail view.

¹ <https://id.superoffice.com/>

² <https://docs.superoffice.com/en/automation/crmscript/overview/envir-and-tools.html>

A screenshot of the SuperOffice Admin client interface. The left sidebar shows a navigation menu with 'CRMScript' selected. The main content area displays the details for a script named 'searchContact'. A red box highlights the 'Key' field, which contains the value 'Wis4NFLP15qlP0Ip'. A red arrow points from the text 'script authentication key' to this key value. Below the details, there is a code editor showing the script's code, which includes a URL with the key as a parameter. The code is as follows:

```
1 #setLanguageLevel 3;  
2  
3 //https://online.superoffice.com/Cust42947/CS/scripts/customer.fcgi?action=safeParse&includeId=searchContact&key=Wis4NFLP15qlP0Ip
