Zoho

This integration requires the following information provided to Dstny

- **ClientId:** (*Obtained from registering your application at the Zoho Accounts developer console*)
- **ClientSecret:** (*Obtained from registering your application at the Zoho Accounts developer console.*)
- **RefreshToken:** (*A refresh token is used to obtain a new access token after the old one expires. Refer below notes to see how to get it*)
- **Region:** *eu*

Following below steps to get the value for above required fields:

1. Go to Zoho Developer Console to register new Server-based Application client. **ClientId** and **ClientSecret** will be generated.

https://www.zoho.com/crm/developer/docs/api/v3/register-client.html

2. Get authorization token[1]:
   a. Entering this authorization request in a browser url: https://accounts.zoho.eu/oauth/v2/auth?client_id={client_id}&response_type=code&redirect_uri={redirect_url}&scope=ZohoCRM.bulk.ALL,ZohoCRM.users.ALL,ZohoCRM.org.ALL,ZohoCRM.settings.ALL,ZohoCRM.coql.READ,ZohoCRM.modules.ALL&access_type=offline
   b. login and accept the permission request (you can change the **Scope list**. refer this link[2])
   c. get the authorization code generated from browser URL:

3. Generate Access Token and Refresh Token
