

This integration requires the following information provided to Dstny

- **key:** (the CRM script authentication key)
- **Token:** (username:password encoded in Base64)
- custId: (customer ID, you can find it in URL. https://online.superoffice.com/Cust42947/default.aspx)
- header: (custom header, default value is "X-CRMScript-Auth")
- **Url:** (the environment-specific URL. e.g. <a href="https://sod2.superoffice.com">https://sod2.superoffice.com</a> for Superoffice sandbox account. Leave it empty for Superoffice production account).

In order to enable the integration, you need to have a CRMScript script named "searchContact" available in Admin client > CRMScript tab. The script is handled by Superoffice vendor (iCentrum). Contact iCentrum¹ if you need help to set this script up in SuperOffice. The script must return the data in the following schema

```
Id: 123456,
FirstName: "fName",

LastName: "lName",

Email: "fname.lname@dstny.com",

CompanyName: "Dstny",

DirectPhone: "+46123456789",

MobilePhone: "+46123456789"
}
```

Following these steps to create CRM script and get the "key":

- 1. To create CRM script, Development Tools (previously Expander Services) license is required.
- 2. Log in SuperOffice website<sup>2</sup>, Open the Admin client by selecting **Settings and maintenance** from the hamburger menu. Select **CRMScript** from the left menu. Refer to this link<sup>2</sup> for more detail.
  - 3. Create a script and add the code.
  - 4. The key value is displayed on the top of script detail view.
